RT "Catalytic mechanism of the adenylyl and guanylyl cyclases: modeling RT and mutational analysis.";

RL Proc. Natl. Acad. Sci. U.S.A. 94:13414-13419(1997).

CC -: CATALYTIC ACTIVITY: GTP = 3',5'-cyclic GMP + diphosphate.

CC -: ENZYME REGULATION: ACTIVATED BY NITRIC OXIDE IN THE PRESENCE OF MAGNESIUM OR MANGAMESE IONS.

CC -: SUBUNIT: HETERODIMER OF AN ALPHA AND A BETA CHAIN.

CC -: SUBUNIT: HETERODIMER OF AN ALPHA AND A BETA CHAIN.

CC -: MISCELLANEOUS: THERE ARE TWO TYPES OF GUANYLATE CYCLASES: SOLUBLE FORMS AND MEMBRANE-ASSOCIATED RECEPTOR FORMS.

CC -: SIMILARITY: BELONGS TO ADENVLYL CYCLASE CLASS-4/GUANYLYL CYCLASE

Neurochem. 60:1570-1573(1993).

1. FUNCTION: MAY HAVE A ROLE IN PHOTOTRANSDUCTION. A SECOND MAY BE REQUIRED FOR ENDYME ACTIVITY.

1. CATALYTIC ACTIVITY: GTP = 3',5'-cyclic GMP + diphosphate.

1. SUBUNIT: DIMER (PROBABLE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-FEB-1995 (Rel. 31, Created)

CATALTYTC ACTIVITY: GTP = 3',5'-cyclic GMP + diphosphat SUBCELLULAR LOCATION: Type I membrane protein.

MISCELLANEOUS: THERE SEEM TO BE AT LEAST THREE ANP RECE WITH GUANYLATE CYCLASE ACTIVITY (ANP-A AND ANP-B) AND O WHICH IS PROBABLY RESPONSIBLE FOR THE CLEARANCE OF ANP CIRCULATION WITHOUT A ROLE IN SIGNAL TRANSDICTION.

SIMILARITY: SOME SIMILARITY WITH CONSERVED REGION OF CANDOMAIN OF PROTEIN KINASES.

SIMILARITY: BELONGS TO ADENYLYL CYCLASE CLASS-4/GUANYLY
                                                                                                                                                                                                                                                                                                SIMILARITY: CONTAINS 1 PROTEIN KINASE-LIKE DOMAIN.

Title: Perfect score: Sequence: 1 MYGFVNHALELLVIRNYGPE.....QVWFLSRKNTGTEETKQDDD 619

Scoring table:

BLOSUM62 Gapop 10.0 , Gapext 0.5

Searched: 112892 seqs, 41476328 residues

Total number of hits satisfying chosen parameters: 112892

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0%
Maximum Match 100%
Listing first 45 summaries

Database : SwissProt_40:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PIR; A36228;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SUBUNIT: HETERODIMER OF AN ALPHA AND A BETA CHAIN. SUBCELLULAR LOCATION: CYCOPLASMIC.
TISSUE SPECIFICITY: KIDNEY AND LIVER.
MISCELLANEOUS: THERE ARE TWO TYPES OF GUANYLATE CY
FORMS AND MEMBRANE-ASSOCIATED RECEPTOR FORMS.
SIMILARITY: BELONGS TO ADENYLYL CYCLASE CLASS-4/GU
FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CATALYTIC ACTIVITY: GTP = 3',5'-cyclic GMP + diphosphate, ENZYME REGULATION: ACTIVATED BY NITRIC OXIDE IN THE PRESENCE MAGGANESE IONS.

Behrends S., Harteneck C., Schultz G., Koesling D.;

A variant of the alpha 2 subunit of soluble guanylyl cyclase grand functions as a dominant negative protein.";

contains an insert homologous to a region within adenylyl cyclases and functions as a dominant negative protein.";

L. J. Biol. Chem. 270:21109-21113(1995).

C. I- FUNCTION: HAS GUANYLYL CYCLASE ON BINDING TO THE BETA-1 SUBUNITS COLOR REGULATOR OF GUANYLYL CYLASE ACTIVITY AS IT FORMS NON-FUNCTION HETERODIMERS WITH THE BETA SUBUNITS.

C. I- CATALYIK ACTIVITY: GTP - 3',5'-cyclic GMP + diphosphate.

C. I- ENZYME REGULATION: ACTIVATED BY NITRIC OXIDE IN THE PRESENCE OXIDE IN THE PRESENCE OXIDE IN THE PRESENCE OXIDE IN THE PRESENCE OXIDE IN THE PRESENCE OXIDE IN FETAL BRAIL SUBUNIT: HETERODIMER OF AN ALPHA AND A BETA CHAIN.

C. I- SUBCELLOUAR LOCATION: Cytoplasmic.

C. I- SUBCELLOUAR LOCATION: Cytoplasmic.

C. I- SUBCELLOUAR LOCATION: Cytoplasmic.

C. I- ALTERNATIVE PRODUCTS: 2 ISOFORMS; ALPHA-2 (SHOWN HERE) AND ALPHA-2-1; ARE PRODUCTS: 2 ISOFORMS; ALPHA-2 (SHOWN HERE) AND ALPHA-2-1; ARE PRODUCTS: 2 ISOFORMS; WHILE THE ALPHA-2-1 FORM IS EXPRESSED IN FETAL BRAIL LIVER, COLON AND ENDOTHELIUM.

C. I- MISCELLANDOUS: THERE ARE TWO TYPES OF GUANYLATE CYCLASES: SOLUTIONS AND MEMBRANE-ASSOCIATED RECEPTOR FORMS.

C. I- SIMILARITY: BELONGS TO ADENYLYL CYCLASE CLASS-4/GUANYLYL CYCLASE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-FEB-1994
